NEBRASKA
DEPARTMENT OF HEALTH
BUREAU OF VITAL STATISTICS

1984 ANNUAL STATISTICAL REPORT

ROBERT KERREY

GOVERNOR

Gregg F. Wright, M.D., M.Ed.
Director of Health

Stanley S. Cooper, M.S., Ph.D.
Director, Bureau of Vital Statistics

Report Prepared by:

Division of Health Data and Statistical Research
Mary Lou Eastman, M.S., Director

FOREWORD

Nebraska statute requires that records of birth, death, fetal death, marriage, and divorce be filed with the Bureau of Vital Statistics of the Department of Health. Approximately 60,000 records of vital events occurring in Nebraska are filed annually, and are added to the nearly five million such records already on file. Over 105,000 certified copies from those records are issued each year.

Responsibility for filing certificates of birth lies with the individual in attendance at birth, usually a physician. Funeral directors are responsible for filing certificates of death and of fetal death when burial takes place. Hospitals are to file fetal death certificates when hospital disposal is performed. County judges and district court clerks are, respectively, responsible for filing records of marriage and divorce.

The excellent cooperation of all the individuals mentioned is appreciated, and permits development of the tabulations presented in this report. Providing useful data stands as the goal of this report, and any questions or comments regarding the report, or requests for more detailed information, should be directed to:

DEATH SECTION

Death Overview. 34-36

Health planning regions 37

Deaths by place of occurrence and by usual residence of deceased for health planning regions, 1982-1984, rate for 1984 38

Deaths by place of occurrence and by usual residence of deceased, 1982-1984, rate for 1984. 39-42

Average age at time of death, male and female, 1984 42

Deaths, sex and race by place of residence, 1984. 43-46

Graph, average age at time of death, 1925-1984. 47

Chart, deaths, ten leading causes by percentage, 1984 48

Leading causes of death by selected age groups and sex, 1984. . . . 49

Six leading causes by age group and sex, 1984 50

Six leading causes, age specific rates, 1984. 50

Six leading causes of death by place of residence, rates, 1984. .51-54

Principal and other causes of death by place of residence, heart, cancer, cerebrovascular, accidents, pneumonia, chronic lung disease, atherosclerosis, diabetes mellitus, suicide, nephritis and nephrosis, and congenital anomalies, 1984 55-59

Black deaths by leading cause and sex, 1984 60

Black deaths, hospital and nonhospital, infant, number and rate, 1984. 60

Principal and other causes of death, 1980-1984. 61

Principal and other causes of death, rates, 1980-1984 62

Cancer deaths by site and sex, 1980-1984. 63

Cancer deaths by site, rates, 1980-1984 64

Principal and other causes of accidental deaths by place of residence, motor vehicle, farm, falls, drowning, and fire, 1984 . . .65-68

Accidental deaths occurring in Nebraska by type of accident and age group, 1984 69

Accidental deaths by cause, 1980-1984 70

TABLE OF CONTENTS

Page

Drownings by site, sex, and age group, 1984 71

Farm fatalities by type, sex and age group, 1984. 71

Suicides by type, sex and age group, 1984 72

Hospital and nonhospital deaths by occurrence and residence, 1984. 73-76

Graph, neonatal and infant deaths, 1925-1984. 77

Deaths under one year of age by cause, sex, race, birth weight, and rate, 1984. 78

Infant, neonatal, perinatal and fetal deaths by place of residence, number and rate, 1984. 79-82

Fetal deaths by cause of death, 1984. 83

Fetal deaths by month, age group of mother, sex, race and place of delivery, 1984 84

MARRIAGE AND DIVORCE SECTION

Marriage and Divorce Overview 85-86

Marriages by county, number and rate, 1981-1984 87-88

Residents married by county, rate, 1984 89

Marriages by education of bride and groom, 1984 90

Marriages by race, bride and groom, 1984. 91

Number of marriages, bride and groom, 1984. 91

Marriages by residence status, bride and groom, 1984. 92

Previous marital status, bride and groom, 1984. 92

Marriages by non-resident bride and groom, 1984 93

Number of marriage by age of bride and groom, 1984. 94

Chart, marriages by age of bride and groom, 1984. 95

Chart, first marriages by age of bride and groom, 1984. 96

Marriages by occupation of bride and groom, 1984. 97

Graph, marriages and divorces by rate, 1925-1984. 98

Divorces by county, number and rate, 1981-1984. 99-100

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. Records of events which occur in other states for Nebraska residents received through an Interstate Exchange Agreement are also utilized. The primary period covered is calendar year 1984, but selected data from previous years are also included. Data from 1984 records received after April 1, 1985 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,606,000, the 1984 estimate published by the United States Bureau of Census. County, city, and balance of county populations used are Health Department estimates. U.S. vital event data, presented for comparative purposes, are provisional and are from the National Center for Health Statistics.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 counties and 12 cities in Nebraska had populations over 10,000 at the 1980 Census. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Information for towns having populations of 2,500 or more are included in this report, but information is available for towns where populations are 1,000 or more persons.

NEBRASKA BIRTHS, DEATHS, MARRIAGES AND DIVORCES

BY NUMBER AND RATE PER 1000 ESTIMATED POPULATION

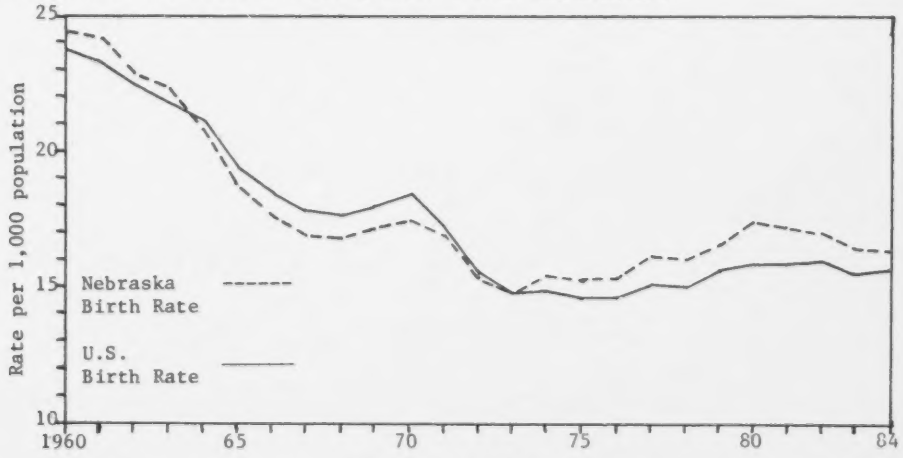
BIRTH OVERVIEW

Nebraska resident live births declined for the fourth consecutive year. This trend should continue for several years, unless the fertility of women in their thirties increases enough to offset the declining fertility and then declining numbers of women in their twenties. Both the number of births and the birth rate decreased by 0.6% between 1983 and 1984. The number of births declined to 26,099 in 1984 from 26,254 in 1983. Nationally, the number of births, the crude birth rate, and the fertility rate all increased slightly over 1983. The United States fertility rate rose to 66.0 live births per 1,000 women aged 15-44 years from 65.4. Nebraska's estimated fertility rate decreased to 70.9 in 1984 from 72.6 in 1983.

The crude birth rate moved slightly lower to 16.3 per 1,000 population from 16.4 in 1983. The United States rate increased slightly to 15.7 in 1984 from 15.5 in 1983. A comparison of Nebraska and United States rates for a twenty-four year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, their trends are similar.



Rates for counties within the State ranged from a high in Thurston County of 24.3 to a low of 6.0 in Hooker County. Rates for towns of at least 2,500 population ranged from a high in Plattsmouth of 22.8 to a low of 11.3 in Fairbury.

Most Nebraska births continue to occur in hospitals and are attended by physicians. In 1984 there were 128(0.5%) births reported as not occurring in hospitals. This percentage increased slightly after being the same for three years. The percent of births reported as not attended by a physician declined steeply to 0.3% from 0.9% in 1983.

The educational level of both mothers and fathers is continuing to increase. The following table shows percentages for known cases. (The number of unknown cases is higher for fathers than mothers because the item is generally not reported on certificates of out-of-wedlock births, but trends should not be significantly affected.)

	MOTHER					FATHER				
EDUCATION	1970	1975	1980	1983	1984	1970	1975	1980	1983	1984
≥12 yrs.	81.6%	83.7	86.4	87.9	88.6	84.7%	88.7	90.6	91.8	92.6
≥16 yrs.	9.6%	14.0	16.1	18.0	18.4	18.6%	23.3	24.3	25.2	25.1

White births accounted for 89.5% of the births in 1984, down from 89.7% in 1983. This continues the trend of several years after a hesitation in the decline last year. Douglas County had the largest share of the non-white births, 53.4%, followed by Lancaster and Sarpy counties with 9.5% and 8.7% respectively.

For the second time in recent years, a set of quadruplets was born in Nebraska. However, the occurrence of multiple births was about average relative to the last ten years.

Out-of-wedlock births increased sharply after a small decline last year. The number increased by 7.6% and the rate increased 8.3%. While the percentage of white births which are out-of-wedlock is much smaller than it is for non-white, its steady increase continued this year. The percentage of out-of-wedlock births accounted for by each race and the percentage of births for each race which were out-of-wedlock are shown in the following table.

	PERCENT OF OUT-OF-WEDLOCK BY RACE			PERCENT OF RACE OUT-OF-WEDLOCK		
	1984	1983	1982	1984	1983	1982
White	67.1	68.5	68.0	10.5	9.9	9.6
Black	23.8	22.5	22.6	63.8	57.5	57.5
Indian	5.1	5.2	5.1	57.8	53.0	53.5
Mexican	3.6	3.5	4.0	17.5	15.9	17.6
All Other	0.4	0.4	0.4	5.2	3.9	4.0

Teenagers continued to account for the largest share of the out-of-wedlock births, but the 20-24 age group is also close to the teenage group. Both in out-of-wedlock births and all births the older age groups are continuing to increase their percentage. The percentage distributions by age groups of mother for out-of-wedlock births and all births for five years are in the following tables.

OUT-OF-WEDLOCK BIRTHS

AGE	1980	1981	1982	1983	1984
< 20	45.6	42.1	40.0	39.0	39.0
20-24	36.1	39.0	37.3	38.9	37.8
25-29	12.3	13.0	15.1	15.0	15.6
30+	5.9	5.8	7.6	7.0	7.7

ALL BIRTHS

AGE	1980	1981	1982	1983	1984
< 20	12.1	11.3	10.5	10.0	9.7
20-24	34.8	34.5	33.8	33.3	31.6
25-29	34.4	34.5	34.8	34.0	34.8
30+	18.8	19.8	21.0	22.6	23.9

A combination of changes in number of persons in the age groups and fertility levels are causing the changes in the distributions in the tables above. The next two tables also give evidence of these population and fertility changes.

AVERAGE AGE OF MOTHER

AGE	1970	1975	1980	1983	1984
1st born	21.4	22.1	22.7	23.3	23.4
2nd born	24.2	24.7	25.4	25.9	26.0
3rd born	26.8	27.3	27.6	28.4	28.2

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2 00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+
1983	13 - 25	26 - 34	35 - 38	39 - 43	44+
1984	12 - 25	26 - 33	34 - 38	39 - 41	42+

The average number of pregnancies per woman having a live born child in 1984 was 2.4, the same as 1983. The average number of live born children per woman having a live born child remained at 2.1 for the third consecutive year. The frequency of high order births (here defined as five or more) has continued to decrease in the 1980's after rapid decrease during the 1970's. The number of high order births in 1970, 1975, 1980 and 1984 was 2655, 1238, 1005, and 942 respectively.

Low birth weights occurred in 5.4% of the births, the same as in 1983. Births of ten or more pounds occurred 2.0% of the time, unchanged for three years. Prenatal care began in the first trimester of pregnancy in 79.6% of the births, a slight decrease from 79.8% in 1983. The percent of mothers who had at least ten prenatal visits increased again to 68.1% from 67.5% in 1983. The percent of mothers who had no prenatal care also increased slightly to 0.6% from 0.5% in 1983.

There were 572 Nebraska resident births in 1984 on which congenital anomalies were reported to the Birth Defects Registry by June 1, 1985. This figure represents 2.2% of the 26,288 live births and fetal deaths, a decrease from the 2.4% reported in 1983.

A much higher proportion of the congenital anomaly cases were of low birth weight than the overall live births, 18.4% as compared to 5.4%. Sixteen cases were stillborn at 20 or more weeks of gestation, representing 8.5% of the fetal deaths. Only one congenital anomaly was reported on 424 of the cases, while 89 had two, 28 had three, 11 had four, and 20 had five or more congenital anomalies noted.

Crystal was the most popular name for girls. Jennifer dropped to fourth after being the most popular for four consecutive years. Matthew replaced John as the most popular name for boys.

Out-of-State: A Nebraska resident giving birth or dying outside of Nebraska.

Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

A slight decrease occurred in the number of deaths in 1984, 0.4%, and the crude rate also declined slightly to 9.1 per 1,000 estimated population from 9.2 in 1983. Nationally, the opposite occurred with small increases in both the number and rate. The United States rate moved to 8.7 in 1984 from 8.6 in 1983.

Within the state, county death rates ranged from a high of 20.4 in Garfield County to a low of 3.4 in Sarpy County. Rates for towns of at least 2,500 population ranged from a high of 21.1 in Broken Bow to a low of 1.9 in LaVista. This is the position held by LaVista throughout the 1970's and 1980's. Sarpy County has often been the lowest county and its rate has been very consistent over the past decade.

The ten leading causes of death remained the same as they were in both 1982 and 1983. Though no positions were changed, Diabetes Mellitus and Suicide showed large changes. Diabetes Mellitus decreased sharply and Suicide increased sharply, a reverse of 1983. In both cases, 1983 appears to be the unusual year and 1984 is closer to what would be expected. Cumulatively, the ten leading causes of death accounted for 83.8% of all deaths.

Heart Disease, the leading cause of death, increased slightly by 0.1%, but the rate declined by 0.4%. The United States rate declined for the fourth consecutive year.

The second most frequent cause of death, Cancer, increased by 4.5% and the rate rose to a new high, returning to the higher side of the national rate. The national rate also increased. Bronchus and Lung is the most common site and there was nearly a 20% increase over last year with the numbers for both male and female reaching record highs. The breast is still the most common site for females and there was a small increase here, but there were decreases in the cervix, uterus and ovary. Death rates per 100,000 estimated population for Heart Disease and Cancer in Nebraska and the United States are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1975	356.7	338.6	179.1	174.4
1976	352.9	338.5	169.9	174.9
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	335.2	188.0	186.3
1981	357.5	329.5	187.5	184.3
1982	361.0	326.9	187.6	188.6
1983	351.7	326.3	184.8	188.6
1984	350.2	323.2	192.2	192.1

Cerebrovascular Disease, the third leading cause of death, decreased by 7.7% after having increased the previous two years, giving a rate of 79.3. The national rate continued its decline and was 65.5 in 1984.

Accidents showed a fairly large increase, 8.8%, offsetting last year's decrease. Motor Vehicle Accidental deaths account for about half of the increase with the remainder scattered in various categories. Drownings, however, were at a record low since this statistic was first tabulated in 1940.

The leading cause of death for males under age 35 was accidents, then heart disease took the lead. Usually accidents are the leader until age 40 but the number of accidental deaths in the 30-34 age group was lower than usual. For females the leading cause of death under age 30 was accidents except in the 5-9 age group where cancer was higher. For the 30-34 age group cancer shared the lead with accidents and then took over the lead until age 70 when heart disease became the most frequent cause.

The average age at time of death continued its upward trend slowly. Overall the average age is 72.7 years, up two-tenths of a year from 1983. The increase was totally caused by an increase for females. The male average remained at 69.3 years while the female average increased to 76.4 years from 76.1 years in 1983. The oldest Nebraskan dying in 1984 was a woman of age 110. This is the oldest person dying since 1977 when there was a woman of age 111. The total number of persons who died at the age of 100 or more years increased to 81 in 1984 from 76 in 1983.

There were 20 males and 61 females who were at or past the century mark.

MATERNAL, INFANT, AND FETAL DEATHS

Maternal deaths were at the highest point they have been since 1975 with 5 following the 1983 experience of none for the first time. One case was attributed to mild or unspecified pre-eclampsia, one to other specified complications of pregnancy, one to postpartum hemorrhage and two to obstetrical pulmonary embolism.

Infant deaths decreased by 2.7% to 251 from 258 in 1983. The neonatal period accounted for the decrease. The infant death rate also declined to a new low of 9.6 per 1,000 live births. The national rate, while it is higher than Nebraska's, also declined. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1980	314	11.5	12.5
1981	268	9.9	11.7
1982	269	10.0	11.2
1983	258	9.8	10.9
1984	251	9.6	10.6

The infant death rate for whites decreased to 9.2 after having increased for two years, while the non-white rate rose sharply to 13.1. The rate for blacks also decreased slightly so the increase was caused by other races. However, small numbers which are subject to chance are involved here.

Fifty-two percent of the infant deaths were of low birth weight, down from 57% in 1983, and 31% of them were under 2 lbs. 4 ozs.

Fetal deaths dropped 5.5% to a new low number of 189 and a new low rate of 7.2 per 1,000 live births.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages decreased both in number and rate between 1983 and 1984, dropping to a total of 13,274 from 13,703. The marriage rate per 1,000 population declined to 8.3 from 8.6 in 1983. The number is the lowest since 1975 and the rate is the lowest since 1965. The United States rate remained at 10.5 for the second year.

Marriage data are generally presented based upon the number of marriages occurring in a given area. Through an exchange of records with other states (in situations where Nebraska residents are married outside the state), it is possible to produce marriage data based on the county of residence. Although the exchange is not complete, the resident data are believed to be complete enough to be useful as general indicators. In 1984, resident county marriage rates ranged from a low of 2.9 persons marrying per 1,000 population in Banner County to a high of 19.8 in Grant County. The state resident marriage rate decreased to 15.1 from 17.0 in 1983.

The most frequent age at marriage for both brides and grooms was 22 years in 1984. This has been the most frequent age for grooms since 1978, but for brides it moved up a year from 1983 and has moved up from 19 in 1980.

The percentage of marriages which were first for both bride and groom decreased to 60.8%, returning to the decreasing trend after an increase last year. The percentage of marriages which were first for neither the bride nor the groom increased to 19.9% from 18.7% in 1983. The following table presents the trend in first marriages for the past five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1980	9,042	63.5
1981	8,894	61.9
1982	8,777	61.2
1983	8,449	61.7
1984	8,074	60.8

Residents of several foreign countries and all except three states, Delaware, Maryland and Rhode Island, were married in Nebraska in 1984. Both bride and groom were Nebraska residents in 88.0% of the marriages; neither was a resident in 4.7%.

June, the traditional month for marriages, was again the most popular with 1,952 occurring then. January remained the least popular month with 530 marriages. June was higher than last year and January was lower.

Nebraska divorces increased by 2.9% in number to 6,348, reversing the decrease by the same percentage in 1983. The rate also returned to 4.0, the same as 1982. The rate for the United States continued its slow downward trend of the 1980's, dropping to 4.9 from 5.0 in 1983.

The most frequently reported ages at divorce were 23 years for women and 28 years for men. These ages vary from year to year but usually more for men than women.

More divorces occurred after two years of marriage than any other length of time, and 38.0% of the 1984 Nebraska divorces occurred less than five years after marriage. This percentage decreased after two years of increase. More than half of the divorces occurred in marriages of less than seven years.

In opposition to the downward trend that had been occurring, a larger percentage of divorces (65.3%) were ending first marriages for both partners. The other end of the scale also reversed direction with 16.3% of the divorces dissolving other than first marriages for both partners, down from 16.9% in 1983.

Some type of settlement was granted in 90.1% of the 1984 divorces. A combination of child support and property settlement was most common (35.8% of cases), followed by property settlement alone (33.2% of cases). Child support was granted in 81.4% of the divorces in which children under 18 were affected. Of the total divorces, 63.3% affected children under 18 years of age. There were an average of 1.8 children per divorce where children under 18 were affected.

POPULATION OVERVIEW

The United States Bureau of the Census estimated the population of Nebraska for 1984 to be 1,606,000, an increase of 0.6% over the 1983 total of 1,597,000.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930 and for part of the current decade.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,518	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,928
1980-1984	47,996	- 11,821

Nebraska has consistently experienced out-migration over the period shown, but it had been decreasing steadily. However, it appears that out-migration may increase during the 1980's.

Population projections for Nebraska are available from the Bureau of Business Research of the University of Nebraska-Lincoln. County estimates for 1984 are available from the Nebraska Department of Natural Resources or the U.S. Bureau of the Census. County, town and age group estimates used in rate calculation in this report were developed by the Health Department for that purpose.

Population counts by age are available only for Census years, and the graphic on the facing page shows Nebraska's population in 1980 distributed by age and sex. The large proportion of the population born during the "baby boom" years, as well as the large proportion of elderly, are evident.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
